

An aerial photograph of a vast agricultural landscape, likely in a developing country, showing a dense grid of small, rectangular plots. The fields are mostly green, but there are significant patches of brown and red, indicating soil erosion or degradation. In the center of the image, a bright red fire is burning, with thick white smoke rising into the air. The text 'Why biodiversity?' is overlaid in white on the central part of the image.

Why biodiversity?

What is biodiversity?

- **Variety of all living things**, the different plants, animals and microorganisma, the genetic information they contain and the ecosystems they form.
- Collectively describes approx. **10 mio species** and their interaction.
- Natural aesthetics, cultural values and spiritual / religious connections, recreation
- Benefits from the organisms, ecosystems and ecological process are called **ecosystem services**.

Ecosystem services

Provisioning Services

Direct supply of goods, often
clear monetary value

Ecosystem services

Regulating services

High value ecosystem services
without monetary value

Ecosystem services

Cultural Services

Contributing to wider needs of society, certain WTP

Ecosystem services

Supporting Services

Essentials to functions of living

Ecosystem services

But...

- More than **26'000 (27%) of assessed species** are threatened with extinction (IUCN 2018)
- More than **30% of global fisheries** have been pushed beyond biological limits (WWF, 2018)
- **Extinctions rates** are estimated to be (at least) **1000 times higher** than the natural rate would be
- **80% of forests** originally covering the earth 8000 years ago have been cleared, fragmented or vanished (EC, 2018)
- Up to **1/3 of world's coral reefs** have perished or are threatened (EC, 2018)
- ...

Drivers of biodiversity loss

Pollution

Pollution of soils, water and atmosphere, i.p. nutrient loading

Land use change

Alteration, fragmentation, loss of habitat

Resource Usage

Over-exploitation of resources

Biotic exchange

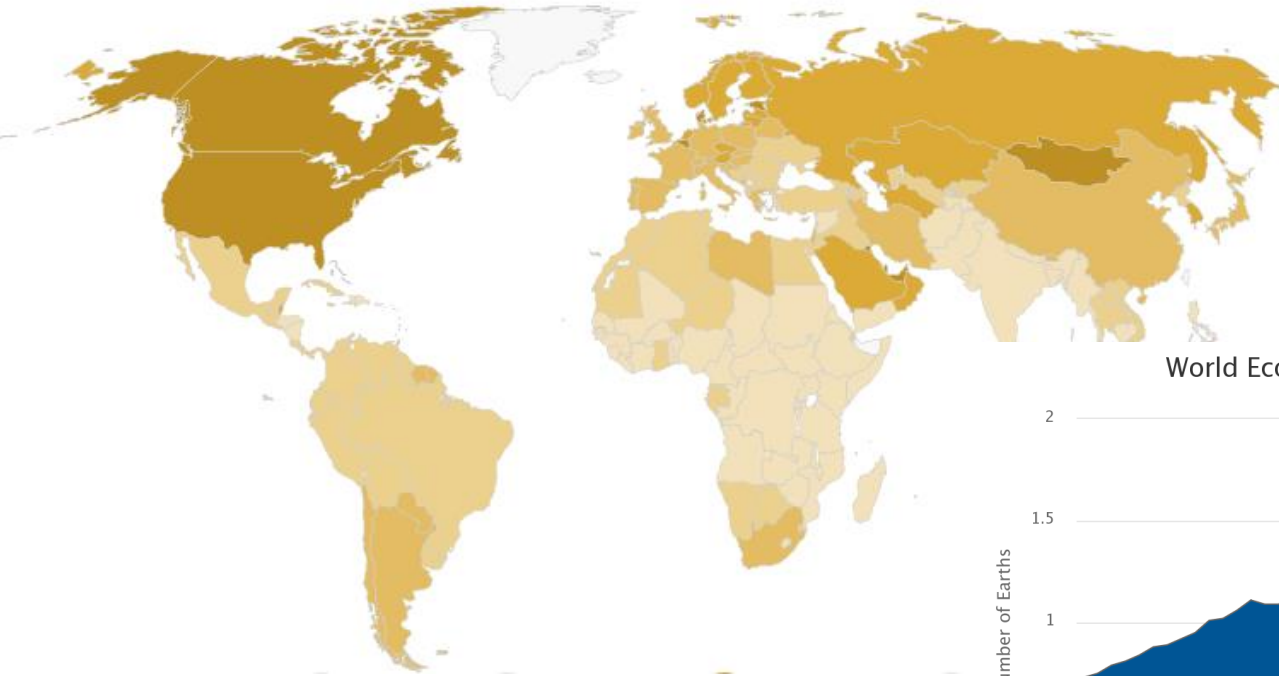

Introduction of exotic species and genetically modified organisms

Climate change

Global warming / changes in temperatures

Root causes

ECOLOGICAL FOOTPRINT PER PERSON

The Ecological Footprint per person is a nation's total Ecological Footprint divided by the total population of the nation. To live within the means of our planet's resources, the world's Ecological Footprint would have to equal the available biocapacity per person on our planet, which is currently 1.7 global hectares. So if a nation's Ecological Footprint per person is 6.8 global hectares, its citizens are demanding four times the resources and wastes that our planet can regenerate and absorb in the atmosphere.

ECOLOGICAL FOOTPRINT PER PERSON OF COUNTRY'S POPULATION (in global hectares)

Global Footprint Network, 2018 National Footprint Accounts

THE GLOBAL TRANSPORTATION SYSTEM

Additionality

Reinforcement

Impact of biodiversity loss

- Species extinction
 - Local extirpation
 - Loss of interactions / novel interactions
 - Loss of functions / ecosystem services
- ➔ Impact not only economically, but also socially, cultural...

Reasons for inaction / ignorance

- Biodiversity / natural capital not accounted for in economic system
- Missing attribution of responsibility
- Short-termism in political system
- Concept of human separation from and supremacy over nature

Responsibility

Priorisation?

Global Governance

Progress of national targets towards the Aichi Targets

Einzelziele der EU-Strategie (entsprechende Ziele der globalen CBD (Aichi-Targets))	Status 2012/ Trend 2010 – 2012
1. Vollständige Umsetzung der EU-Vogelschutz- und der FFH-Richtlinie (Aichi-Targets 11, 12)	
2. Erhaltung und Wiederherstellung von Ökosystemen und Ökosystemdienstleistungen (Aichi-Targets 5, 14, 15)	

3. Erhöhung des Beitrags von Land- und Forstwirtschaft zur Erhaltung und Verbesserung der Biodiversität (Aichi-Targets 3, 7, 8)	
	

4. Sicherstellung der nachhaltigen Nutzung von Fischereiressourcen (Aichi-Targets 6, 10)	
5. Bekämpfung invasiver gebietsfremder Arten (Aichi-Target 9)	
6. Erhöhung des Beitrags der EU zur Vermeidung des globalen Biodiversitätsverlustes (v. a. Aichi-Targets 2, 3, 4, 10, 16, 20)	

 = Auf der Zielgeraden
  = Auf halbem Weg
  = Am Anfang

 = positiv
  = stagnierend
